SUMMARY

Front-End Developer specializing in React architecture, global state management, and enterprise AI UI integration. Experienced in building high-traffic commercial platforms and passionate about elevating interactive web rendering through emerging Web3D and GenAI technologies.

EXPERIENCE

Front-End Developer

Neurelli

October 2024 – February 2026, Taipei

- *Neurelli provides AI predictive systems and data analytics, delivering scalable computer vision solutions to enhance manufacturing precision.*
- **Developed enterprise React applications** for AI-driven defect detection and elevator recognition, translating complex models into intuitive, productized UI solutions.
- **Integrated frontend UI with PyQt camera feeds**, engineering interactive features (ROI adjustments, dynamic heatmaps, image zoom) to ensure high-precision visual fidelity.
- **Architected global frontend state** utilizing Redux and Redux Persist, ensuring precise cross-component control and seamless data persistence across sessions.
- **Optimized client-side performance** by implementing rapid memory release for high-resolution images and migrating real-time monitoring to the browser, significantly reducing server overhead.

Front-End Developer

Asia Road Technology Co., Ltd.

July 2023 – October 2024, Taipei

- *A digital agency delivering customized web solutions and large-scale e-commerce platforms for enterprise clients.*
- **Engineered high-traffic commercial platforms**, including the official e-commerce site for the Taiwan National Palace Museum Boutique and Syntrend Digital Life Park, ensuring scalable architecture and seamless UX.
- **Developed custom web solutions** for over 30 corporate clients utilizing HTML5, CSS3, and modern JavaScript, transforming complex UI/UX designs into pixel-perfect websites.
- **Optimized frontend performance**, restructuring legacy codebases to improve page load speeds and overall browsing fluidity across mobile and desktop devices.

PROJECT

Entropy Void – Real-time AI Visualizer

Personal Project • charlie-entropy-void.vercel.app/ • March 2026 – March 2026

- Engineered a Real-time "AI to UI" Architecture: Built a 3D thermodynamic visualizer using React and Three.js, integrated with Transformers.js for zero-latency, on-device sentiment analysis without server reliance.
- Implemented Global Data Synchronization: Connected Firebase Cloud Firestore to instantly sync emotional frequency inputs across all active users globally, maintaining a real-time, shared HUD experience.
- Resolved Critical iOS Safari Rendering Issues: Authored custom CSS architectures to completely bypass native mobile constraints (e.g., rubber-band scrolling, auto-zoom on inputs), achieving a pixel-perfect, native-app-like immersion.

EDUCATION

Bachelor of Science in Engineering Science

National Cheng Kung University • Tainan • 2018

SKILLS

Frontend & Architecture: React, Next.js, JavaScript (ES6+), Redux / Context API, HTML5/CSS3.

Creative Tech & AI: Three.js, React Three Fiber (R3F), Transformers.js (In-Browser AI).

Backend & Cloud Integration: Node.js, MongoDB, Firebase (Firestore & Real-time Sync), RESTful API, Git.
